

AT&T's complete suite of VPN services  
**connects you**  
to what  
**matters most.**

Global Network Services

From the mountain peaks in **Peru**  
to the shores of **Scotland**,  
AT&T Global Network Services  
connects you to what matters most.

**S**uccess in today's business world requires you to stay connected — to customers, partners and corporate resources. Whether you're a single user working from home or abroad, or a multinational company with sites around the world, AT&T Global Network Services meets your connectivity needs — now and in the future.

AT&T Global Network Services' full suite of Virtual Private Network (VPN) services will connect you to the people and information that matter most. A VPN connects branch offices and allows remote workers to access corporate networks securely using a public network — the Internet — or a shared private network.

**As you grow your business,  
we grow with you.**

Our suite of VPN services provides fast, reliable and comprehensive access to essential resources worldwide. Leverage your investments by adding new functionality with our easy-to-use services that integrate with your current network. AT&T's fully managed VPN services are monitored and supported by 24-hour help desks and provide worldwide accessibility, giving you peace of mind and allowing you to focus on your core business.

# Connections — Anytime, Anywhere

For telecommuters, mobile workers and employees whose work hours extend past 9 to 5, staying connected is essential to keep up with the pace of business. Wherever you're working, you need reliable, secure access to corporate information, applications and the Internet. AT&T Global Network Services has the answer for you with our Managed VPN Tunnelling service.

***Whether you're in northern England or Southeast Asia, AT&T Managed VPN Tunnelling service supplies reliable remote access that helps you work more efficiently.***

With your dial-up, cable or DSL connection, the service provides a secure and low-cost route to the Internet and your corporate data. You don't need any training or additional configuration to use the AT&T Global Network Client software — just choose the country and city where you're located and we take care of the rest.

At AT&T, we also understand the importance of security and privacy to you and your business.

We safeguard your network communications using advanced security features such as IPSec and 3DES encryption, so you can do business with confidence.

AT&T Global Network Services provides reliable, secure and hassle-free connectivity supported by our global multilingual help desks. Trust AT&T's VPN services to take care of your remote communication needs.

# Expanding the Network

As your company grows and expands globally, your communications and networking needs become more complex as bandwidth, performance and accessibility demands increase. It's no longer a matter of simply connecting local offices and a few remote users — now you need to connect several remote branches with multiple users at each site.

For companies with geographically dispersed branch offices, AT&T Global Network Services offers Dedicated Broadband VPN and Dedicated Site-to-Site VPN services as cost-effective alternatives to achieve branch-office connectivity. Instead of trying to manage your growing networking needs in-house and having to deal with multiple service providers locally or across the globe, we offer fully managed turnkey networking services including equipment, installation and round-the-clock monitoring.

## Fast. Reliable. Secure.

Today, a lot of companies with small- and medium-sized branch sites such as retail stores and franchises interconnect using the phone or fax. But often, these do not provide the most efficient way to communicate with remote offices and keep up with the pace of business.

AT&T's Dedicated Broadband VPN service is designed specifically for those companies looking to connect headquarters to branch offices with up to 25 users per site. It provides companies a low-cost option to expand their corporate network. Featuring VPN appliance AT&T NetGate 6100™, the service offers “always-on” functionality, secure access and high-speed bandwidth for multiple users in any site. Broadband VPN also allows users to connect to both your corporate intranet and the Internet with a single connection.

## Global Reach

For companies with sites that have more than 25 employees or want to provide connections between branch offices as well as headquarters, AT&T Global Network Services can also meet your networking needs.

AT&T Global Network Services Dedicated Site-to-Site VPN handles a greater number of users, and satisfies higher availability and reliability requirements. Running over an IP network, Dedicated Site-to-Site VPN presents a simple and cost-effective alternative to expanding and managing your network in-house. Our service provides a complete solution to conveniently interconnect your offices that are globally distributed.

With these comprehensive services from AT&T Global Network Services, companies can rest easy knowing their employees are able to quickly and conveniently connect to their clients, to each other and back to the office. Let our expertise help you save time and money so that you can focus on growing your business.

# Growing Your Capabilities

As your business evolves, your connectivity requirements are also expanding. After all, doing business globally means you need a reliable global network that supports your mission critical applications. But managing your own network can be complex. Let AT&T Global Network Services take care of all your global networking needs so you can focus on your core business.

With AT&T Global Network Services Managed Enterprise VPN service, we can help you expand your network capabilities to meet your business needs today — and in the future. Managed Enterprise VPN service, delivered over a Multi-Protocol Label Switching (MPLS) infrastructure, provides global businesses a private network-based VPN solution that is flexible, reliable and backed by service level commitments.

## Top Priority

Along with sharing more information, global businesses are also increasingly running multimedia and voice applications over their networks. But as companies add more applications to their network, network congestion can become a serious problem.

Managed Enterprise VPN offers a Class of Service feature to ensure you have greater control over the use of your network bandwidth. Class of Service categorizes your communications and allows you to specify bandwidth allocation for different applications. This feature ensures delivery of higher priority traffic ahead of lower priority traffic while providing the minimum bandwidth required. With Managed Enterprise VPN, not only do you have reliable network access, but with Class of Service you can also prioritize the applications that matter most to your business.

Managed Enterprise VPN service quality is backed by Service Level Agreements to ensure your satisfaction and give you peace of mind about business-critical links for your globally dispersed company.

**Trust AT&T Global Network Services Managed Enterprise VPN for a flexible and reliable MPLS-based VPN service for your growing global connectivity needs.**

## Common benefits of VPN services:

- Fully managed services — proactive monitoring and 24-hour global support in multiple languages
- Global availability with a single point of contact
- Local, regional or global invoicing available in multiple currencies
- Services work with existing technology to leverage current investments
- Turnkey solution requiring no additional capital investment

## Staying connected is essential to business success.

Whether you're a single user working remotely in Hong Kong, or an international company looking to connect your European offices to headquarters in Toronto, AT&T Global Network Services works with you to select the appropriate VPN services that can meet your connectivity needs — today and in the future.

Trust AT&T Global Network Services for fast, reliable and comprehensive network services to meet all of your connectivity needs.
