# Upgrading our network for an advanced experience

In order to keep up with exploding demand for mobile broadband data, AT&T announced plans in August of 2012 to sunset its 2G network by approximately January 1, 2017. This will allow AT&T to free up spectrum for added capacity to our advanced wireless networks, enabling more AT&T customers to have a better experience. Our advanced networks enable the delivery of more enhanced applications and solutions that benefit your customers and employees.

AT&T strongly encourages all of its customers to adopt 3G or LTE service and migrate all 2G devices as soon as possible. Your account team will be a valuable resource as you plan your 3G adoption and migration. Please feel free to contact your account team with any questions or concerns.
