AT&T Virtual Care
Scalable, customizable and clinically connected telehealth solutions

Addressing common industry problems
The practice of healthcare is going through a fundamental transformation.

- Fewer clinicians are serving growing patient populations
- Resources and staff are stretched thin
- Centralized healthcare resources are inadequate to serve wider geographical areas, including underserved and rural patients

AT&T Virtual Care can help provide better healthcare to more patients

- Bridges the gap between limited clinical resources and growing demands
- Fosters a more connected system of care
- Helps providers extend the reach of care beyond the walls of the healthcare facility, including at home and in the outpatient setting

Fourteen states already have adopted mandates for the coverage of telehealth. Payors, providers, and government entities are rapidly creating policies to enable and promote the use of telehealth.

Choices that meet your organization’s specific needs
From specific custom solutions for video equipment to fully integrated, connected telehealth systems, AT&T can provide the level of telehealth that makes sense for your organization today and in the future.

Choose the level of implementation that is right for you:

Standard AT&T Virtual Care
Have a specific challenge you need to address quickly? AT&T will work with you to find a solution compatible with your existing systems to meet your most pressing needs, including telehealth video endpoints and peripheral devices.

Benefits
- Expands the reach of scarce specialty care resources
- Accelerates critical medical interventions
- Helps reduce healthcare costs
- Reduces travel time and cost
- Reaches rural, elderly, underserved populations
- Supports improved patient compliance
- Supports efficient delivery of continued medical education
- Promotes reduction of hospital readmission rates

Features*
- Data and wireless network connectivity
- Clinical integration capabilities
- Clinical workflow automation
- Video call automation
- Monthly cost model and financing
- Best-in-class portfolio of clinical and video components
- Video bridging services
- Flexible video endpoints, including smartphones, tablets and desktops
- Compatibility with several diagnostic tools: vital signs monitors, ultrasound probes, spirometers, scopes, etc. (customizable and scalable)
- Robust management options
- Ultra-high-definition video capable of transmitting even the most subtle facial expressions and body language
- High-fidelity audio
Custom AT&T Virtual Care
If you want to start with a small investment, but put a strategic telehealth foundation in place, AT&T will help you design an efficient, programmatic, and profitable solution that is standardized and scalable. AT&T can also take on as much or as little of the solution management you desire once it is deployed.

Managed AT&T Virtual Care
AT&T provides the support to help you achieve the ultimate end-goal for telehealth: clinical integration. We can integrate AT&T Virtual Care with existing electronic medical records systems, medical imaging, mobile solutions, and remote patient monitoring solutions. A turnkey, solution-based approach for one fixed monthly fee, AT&T can provide end-to-end management.

The AT&T difference: performance and efficiency to make telehealth work
Selecting the right telehealth provider is essential. Other telehealth systems may not support enhanced clinical integration and workflow required to make telehealth scalable and successful. AT&T is uniquely positioned to deliver a total AT&T Virtual Care solution that includes:

- Underlying network, consulting, and management services
- Strong technology and healthcare vendor alliances
- Diverse video teleconferencing, mobile solutions and medical devices needed for a fully-integrated telehealth solution

Our diversified approach allows us to design and implement telehealth solutions that deliver optimal system performance to accelerate adoption and use by physicians and patients.
