- Added Service Manager Reporting support. Client now sends connection data to Service Manager to generate customer facing reports.
- Fixed problem with VPN connections failing on Yosemite with error message "Please contact customer support."

### Version 1.6.1 – October 1, 2014

- Mac OS X upgrades to Yosemite no longer require a re-install of the AT&T Global Network Client.

- As of product release, mobile drivers were not available for Yosemite. Therefore, mobile USB cards are not yet supported on Yosemite.

### Version 1.6 – August 26, 2014

- Initial testing and fixes for Yosemite support.
- Fixed issue with some users not being able to make VPN connections.
- Added ability to customize a package id and kit version for configuration enforcement.
- As of product release, mobile drivers were not available for Yosemite. Therefore, mobile USB cards are not yet supported on Yosemite.

### Version 1.5 – May 28, 2014

- Add the ability to upload support logs to an AT&T server
- Include updated mobile device drivers to allow single installation package for all supporting operating system versions
- Properly handle software upgrades
- Update the “Secure Web Proxy (HTTPS)” in addition to the “Web Proxy (HTTP)” proxy setting using the proxy value returned from service manager

### Version 1.4 – March 3, 2014

- Added support for software token authentication
- Prevent Mac OS X firewall from presenting warning during each connection attempt
- Include last five archived system logs when gathering logs

### Version 1.3 – November 22, 2013

- Added support OS X Mavericks
- Updated kernel extensions for AT&T Beam

### Version 1.2 – November 5, 2013

- Added support for AT&T Beam
- Added support for custom APNs
- Added support for unlocking a locked SIM
- Added basic support for non-AT&T mobile devices
- Bug Fix: Do not send Wi-Fi Focus records every time Wi-Fi state changes
- Bug Fix: Ensure proper connecting screen is displayed

### Version 1.1 – July 12, 2013

- Added support for generic challenge/response authentication
- Added support for SecurID New PIN and Next Card Code
- Ensured application runs on older 32-bit processors
- Added limited config enforcement support
- Added ability to configure proxy settings for VPN connections.

### Version 1.0.1 – April 19, 2013

- Added ability to use the client without storing a keychain entry.
- Fixed crash when user-id contains more than 9 characters.
- Improved connection success rate by enhancing authentication server retry logic and giving mobile devices time to get to an active state.
- Simplified profile creation process with only needing to specify Internet or VPN.
- System.log is now included when gathering support information.
- Simplified enablement process by using Mac specific group id for VPN connections.

### Version 1.0 – September 17, 2012

- Enable connections to all of AT&T's partner Wi-Fi hotspots globally
- Enable connections to AT&T managed VPN services
- List available AT&T helpdesks globally
- Provide logging to enable helpdesks to quickly assist with connection issues
- Provide update capability to keep access point database current
