

AT&T eBonding for mobility services

Streamline ordering with a direct interface to AT&T systems

Would you like to seamlessly integrate your internal systems with AT&T systems to enjoy easier ordering and managing of wireless devices and plans? If you perform a large number of transactions, then AT&T eBonding for mobility services could be right for you.

eBonding for mobility services is an application programming interface (API)-enabled, system-to-system electronic bond between your business and AT&T. This bond will enable you to pull information directly from AT&T, and perform transactions using your own business processes and systems.

With eBonding for mobility services you can accomplish many device, rate plan, and account management tasks without entering your requests separately into Premier, the AT&T portal for purchasing and managing wireless devices.

Streamline ordering of wireless devices

The eBonding for mobility API enables you to place orders directly with the Premier Online Store so you can:

- Place bulk orders for new wireless devices, upgrade existing devices, and port numbers from another carrier.
- Buy the latest phones, devices, and rate plans at your unique contract pricing.
- Enjoy savings and offers available only to AT&T Premier customers.
- Receive the status of your orders either automatically or on demand.

Conveniently manage wireless accounts

The eBonding for mobility API enables you to manage your wireless accounts

and billing with a direct connection to Premier Online Care so you can:

- Update wireless user information.
- Change rate plans and features.
- Suspend or reinstate service.
- Receive the status of your changes either automatically or on demand.

Rest assured that your AT&T catalog is up to date

The eBonding for mobility Catalog API automatically provides regularly scheduled product catalog updates to your systems so you can:

- Receive a regularly scheduled catalog automatically or on demand.
- Easily identify features, accessories, and discounts compatible with your devices.
- Receive new devices when they are available.

Obtain accurate price quotes

The eBonding for mobility Price Quote API automatically provides up-to-date pricing — by SKU, if you wish — on your devices, rate plans, features, and accessories.

Know your current usage and inventory

The Current Usage API on eBonding automatically provides information on unbilled voice, data, and messaging usage.

The Inventory API provides rate plan and wireless user inventory reports automatically or on demand.
