

2.3.2 Network Management [L.34.2.3.2]

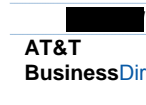

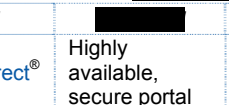

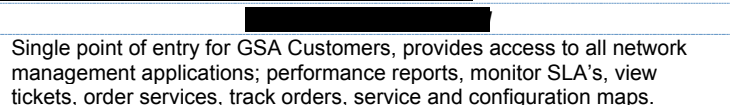

GSA and Agencies are provided with the ability to monitor the management, performance, and maintenance of Networkx service offerings. In this module we demonstrate how GSA customers' service requirements are effectively managed across the five areas of the ISO model - fault, configuration, accounting, security, and performance.

L.34.2.3.2 Network Management; The offeror shall describe how it proposes to meet Government requirements specified in Section C.3.3.1, Network Management. The offeror shall describe its management, technical, and operational capabilities for each of the following network management functional areas: (a) Configuration, Management, (b) Accounting Management, (c) Fault Management, (d) Network Services Monitoring and Management. For all services proposed, the offeror shall describe its network management organization, resources, strategies, practices, policies, processes, procedures, tools, systems, reports and any other relevant capabilities to provide the Government with a high degree of confidence that the offeror has sound, effective, and adequate capabilities that meet Government network management requirements. For the network management areas above, the offeror shall describe its network management capabilities to provide the Government a high degree of confidence that the offeror will be a strong partner that understands the challenges that the Government faces in: (a) Managing the range of Networkx services, (b) Meeting the needs of a large, heterogeneous, and geographically distributed user community, (c) Ensuring the performance and quality of Networkx services, (d) Improving the quality of Networkx services to its customers, (e) Minimizing the impact of Networkx services changes to Government operations, (f) Planning for future growth, (g) Meeting changes in Government needs, (h) Ensuring real-time access to information regarding the health and performance of, mission-critical services. For Network Services Monitoring and Management, the offeror shall describe the solution's architecture, features, and functions that will be provided to the Government. This includes security features, support to the Government to install, configure, administer, and operate the solution, and the Networkx services for which the solution is provided. If the Offeror's approach to meeting Network Management requirements is different for optional services than for mandatory services, the offeror shall describe the differences in a separate optional services sub-section within the Network Management section of the Offeror's response.

The AT&T Networkx solution is compliant in all areas required by GSA - fault, configuration, accounting, security, and performance. The solution includes a number of powerful platforms, described in **Table 2.3.2-1**.

The components of the system architecture, their functions, and benefits to GSA Customers are represented in **Figure 2.3.2-1**. 

 for each element of the GSA Customers' service, permitting fast, accurate root cause identification, avoiding downtime and reducing mean time to repair.

[illegible]

Table 2.3.2-1 Network Management System Architecture Components. *These components give GSA Customers high service availability, high service performance, a common tool set, and easy to access web portal.*

Figure 2.3.2-1: Network Management System Architecture. AT&T's network management solution offers GSA Customers a complete solution.

These architectural components provide GSA Customers with robust network management capabilities. Network management functions are accessed

through a secure web site that provides visibility to track service quality,
including [REDACTED]

AT&T's network management solution is built upon reliability and performance.
To achieve this, the physical and logical layers of the network are managed in
reactive, proactive, and predictive manners. [REDACTED]

Figure 2.3.2-2: Network Management: Reliability + Performance. AT&T's network management solution offers GSA customers outstanding reliability and performance by reactive, proactive, and predictive management of the physical and logical layers of the network.

Global Network Operations Center (GNOC) and Global Technology Centers of Excellence (CoE)

The GNOC (pictured in **Figure 2.3.2-3**) is responsible for the overall network management of the Global AT&T Switched and Data Networks. The AT&T GNOC in Bedminster, New Jersey, in partnership with technology specific Centers of Excellence, form the largest, most sophisticated command-and-control and fault management centers of its kind in the world.

M0446v1

Figure 2.3.2-3: AT&T Global Network Operations Center (GNOC). The GNOC is responsible for managing AT&T's Global Network.

AT&T's GNOC, manages one of the largest and most complex networks in the world with the following features and traffic volumes:

- More than 2.75 billion circuit miles of transmission facilities
- 135 local circuit switches with real-time networking
- More than 300 million voice calls per day
- More than 15 million video customers
- Connects virtually every country and territory around the world
- More than 1,000 nodes supporting MPLS-based services
- Carries 4.4 petabytes of IP traffic per business day
- 24X7 centers monitoring over 125,000 routers and 750,000 LAN ports
- Provides managed hosting services from 26 Internet Data Centers (IDCs) worldwide

Assisting the GNOC are the Global Technology Centers of Excellence (CoE). The CoEs provide 24x7 surveillance of network elements supplied to the

Government; providing progress and event notification to the Customer Support Office (CSO) and Contractor's Program Organization (CPO). The CoEs perform asset management, including the availability of spare equipment, and perform logical configuration management. Network upgrades and change management are directly managed by the CoEs (this includes maintenance, capacity management, and activities of the on-site workforce). The GNOC and the CoEs' structure and functions are summarized in **Figure 2.3.2-4**. The people, processes, and network management tools of AT&T's solution enable the Government's Network services to routinely maintain very high availability and performance. As proof of this for the **entire** year of 2004, the AT&T Global network had a reliability performance rating of between 99.991% and 99.998%. [REDACTED]

Figure 2.3.2-5.

AT&T Maintenance Operations Work Center Structure and Functions

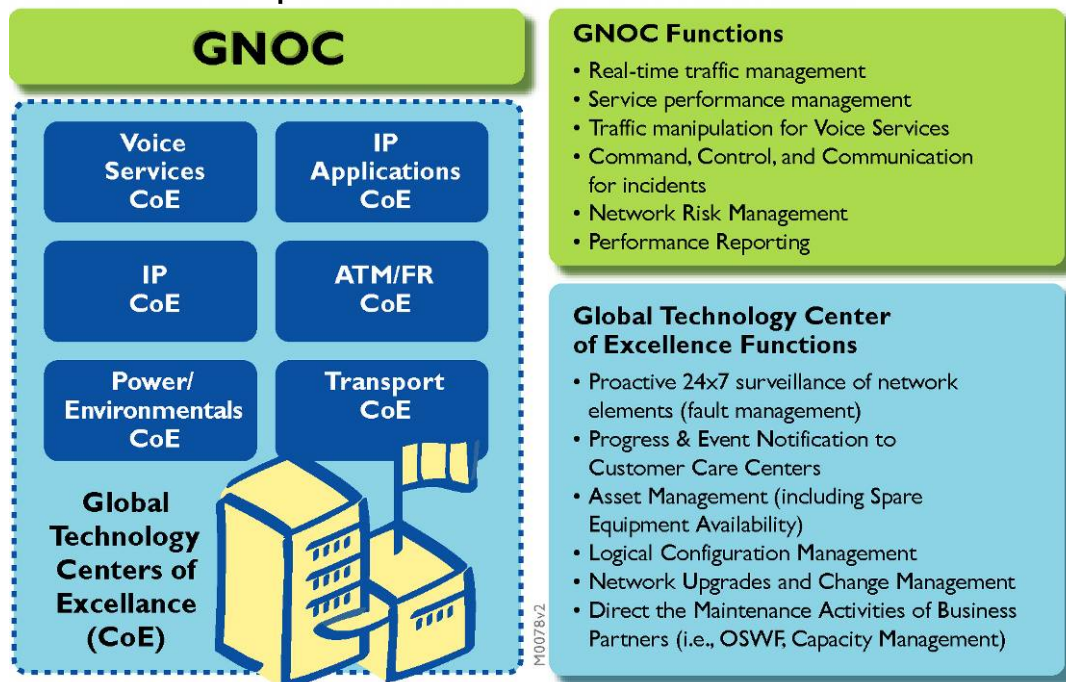

Figure 2.3.2-4 Network Maintenance Workcenter Structure and Functions. GSA Customers leverage the people, process, and tools of one of the most reliable networks in the world.

Networkx Security Management [L.34.2.3.2, C.3.3.1.2.1 Step 1]

The contractor shall provide network security and fraud prevention, detection, and reporting as specified in Section C.3.3.2, Security Management.

AT&T will provide network security and fraud prevention, detection, and reporting as specified in Section C.3.3.2, Security Management.

The GSA and Agencies have the commitment of AT&T to protect all information and resources from unauthorized access, disclosure, corruption, or disruption of service. This security policy is applicable to network elements, systems, applications and workstations as part of our service offerings.

[REDACTED]

[REDACTED] **Table 2.3.2-3.** [REDACTED]

[REDACTED] AT&T

Labs are continually updating these capabilities as demanded to prevent security threats and vulnerabilities.

	<p>AT&T Labs is the only organization of its kind, guided by the day-to-day needs of AT&T's commercial and government operational business units. No other service provider on the globe maintains the type of research commitment to networking – and more specifically to MPLS – than AT&T.</p>	

Table 2.3.2-3: AT&T Carrier Grade Security Capabilities.

GSA and the Agencies are provided fraud prevention, detection and reporting through a variety of systems across all service types.

Figure 2.3.2-6

Figure 2.3.2-6: Global Fraud Management System.

[REDACTED]
[REDACTED]
[REDACTED]
[REDACTED] This capability enables investigators to pinpoint exact calls thereby assisting successful prosecution of fraudulent activities.

AT&T Networkx Team member Cingular also provides fraud management capabilities for GSA customers. **Table 2.3.2-4** summarizes these capabilities.

FRAUD AREA	CINGULAR CAPABILITIES
[REDACTED]	[REDACTED]
[REDACTED]	[REDACTED]
[REDACTED]	[REDACTED]
[REDACTED]	[REDACTED]
[REDACTED]	[REDACTED]

Table 2.3.2-4: Cingular Fraud Management. AT&T's wireless partner has extensive fraud management capabilities to safeguard Networkx wireless customers.

AT&T provides network security and fraud prevention, detection, and reporting as specified in the Networkx Security plan and in Section 2.3.3 (C.3.3.2) of the proposal, Security Management.

Configuration Management [L.34.2.3.2, C.3.3.1.2.2 Step 2]

Exact details of change control methodology vary, depending upon the customer service or infrastructure requirement (voice, private line, frame relay, ATM, IP, etc.). However, AT&T follows certain general principles irrespective of service. From an equipment perspective, [REDACTED]
[REDACTED]

[REDACTED]

[REDACTED] as small as a new card for a router, or an upgrade to router operating system software. Each network service such as, transport, private line, ATM, frame relay or IP, uses one or more test labs for pre-deployment and integration testing. Equipment tests answer the questions in **Table 2.3.2-5**:

[REDACTED]	[REDACTED]
[REDACTED]	[REDACTED]
[REDACTED]	[REDACTED]
[REDACTED]	[REDACTED]
[REDACTED]	[REDACTED]

Table 2.3.2-5: Equipment Validation and Verification (V&V) Tests. [REDACTED]

The length of the testing period depends upon the device to be deployed. [REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

Once the equipment has passed these tests satisfactorily, it is certified and may be installed. Should the device fail to become certified, feedback is provided to the vendor detailing the test results. AT&T participates in joint planning meetings with the manufacturers and vendors to resolve the equipment faults that were revealed. These meetings assist the suppliers in enhancing the reliability and manageability of their products. To maintain the highest level of service reliability to the Government, devices that have not passed these rigorous tests are not installed in the network.

Prior to scheduling an installation of certified equipment in the network, a deployment plan is developed. When the deployment of equipment or enhancements to the network could affect the quality or availability of the

Government's service during the installation, the affected Agencies are notified as well as the GSA at least 10 business days in advance of the work. For large scale changes 20 business days notice is provided. All upgrades are performed during an appropriate maintenance window as detailed in **Table 2.3.2-6**. As required, the GSA and Agencies are also notified in the same manner of network configuration upgrades that do not present a risk of service interruption. [REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

The contractor shall perform configuration changes in a standard maintenance window as stated in the contract to minimize service impact to the Government. [C.3.3.1.2.2]

AT&T will perform configuration changes in a standard maintenance window as stated in the contract to minimize service impact to the Government. GSA and the Agencies receive global network [REDACTED] AT&T uses

[REDACTED]

[REDACTED]

ensuring high network performance and consequently better, more reliable service to the Government (**Table 2.3.2-6**).

COUNTRY	SCHEDULED MAINTENANCE TIMES

COUNTRY	SCHEDULED MAINTENANCE TIMES
[REDACTED]	[REDACTED]
[REDACTED]	[REDACTED]

Table 2.3.2-6: Scheduled Maintenance. *Scheduled maintenance is planned worldwide.*

The scheduled maintenance windows are typically used to maintain many backbone sites. The existence of a scheduled maintenance time does not mean maintenance actually occurs during the period. The PMO and affected Agencies are notified at least 10 business days in advance prior to a scheduled network configuration change. In the event an emergency configuration change is required and if due to the nature of the emergency 10 days notice is not practical, AT&T then opens a trouble ticket. In addition the PMO and affected Agencies are immediately notified. In the event of a large scale configuration change the PMO and affected Agencies receive 20 business days notice. All configuration notifications are through e-mail, facsimile, or other agreed to method.

This database shall enable the Government to assess how network changes may impact services to Agencies. [C.3.3.1.2.2]
This database shall enable the Government to perform impact analyses on services during outages. [C.3.3.1.2.2]

AT&T will provide a database that will enable the Government to assess how network changes may impact services to Agencies and to perform impact analyses on services during outages. **Figure 2.3.2-7** is the AT&T **BusinessDirect** Map application, showing a representation of a customer network. [REDACTED]

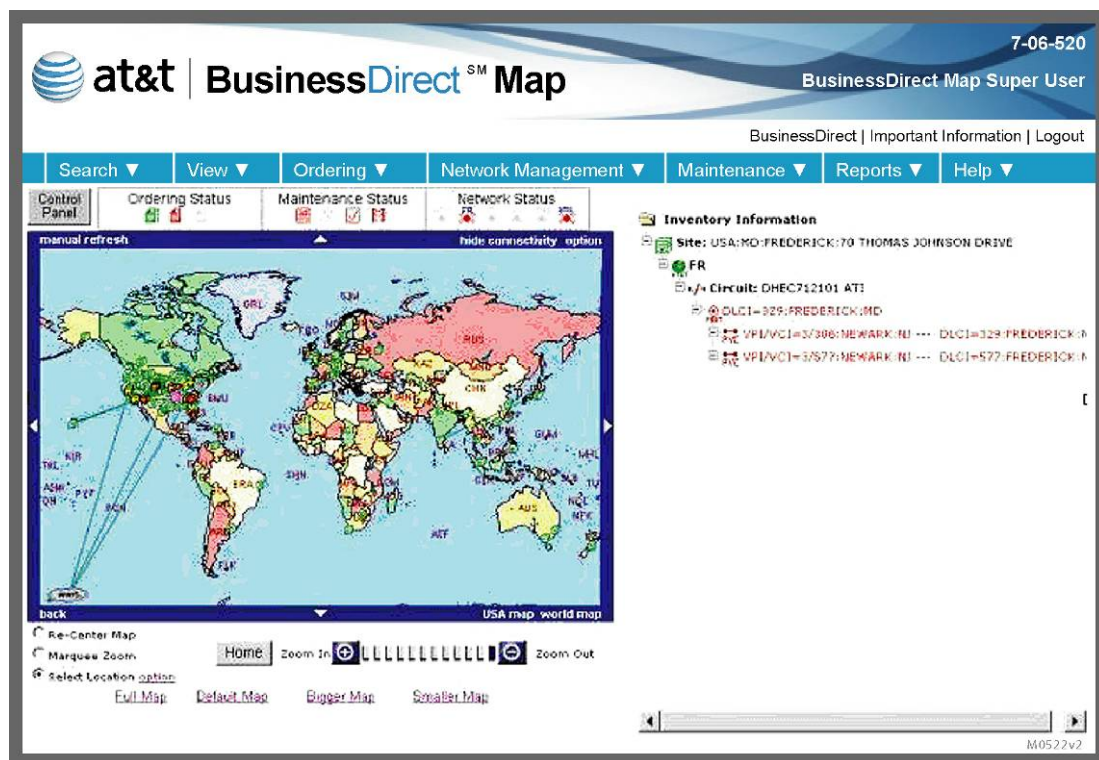

Figure 2.3.2-7: AT&T BusinessDirect Map Network Customer Interface. Using the [REDACTED] Network customers, the Government can monitor trouble as well as manage network services through AT&T BusinessDirect Map.

Accounting Management [L.34.2.3.2, C.3.3.1.2.3 Step 3]

The contractor's network accounting management system shall provide for the generation and distribution of usage data to support the contractor's detection, resolution, and reporting of network fraud, and abuse as well as optimization activity defined in Section C.3.4, Customer Service.

AT&T's accounting management system will provide for the generation and distribution of usage data to support AT&T's detection, resolution, and reporting of network fraud/abuse, as well as the optimization activity defined

in Section C.3.4, Customer Service. AT&T's accounting systems capture data for all network service components employed to provide GSA Customers' service to the service delivery point, including facilities that may be leased from 3rd party providers. [REDACTED]

[REDACTED]

[REDACTED] defined in section C.3.4 Customer Service. The GSA and subscribing Agencies have access to management tools for these services to query and [REDACTED]

Mobile Satellite Services (MSS) [REDACTED]

[REDACTED]

[REDACTED] (by the GNOC) if fraudulent use is suspected.

The contractor shall provide the Government with ad hoc traffic and usage reports to support the Government's telecommunications planning and avoidance of fraud, waste, and abuse. [C.3.3.1.2.3]

The contractor shall provide at a minimum Voice Traffic and Data Traffic reports. See Sections C.3.3.1.4.1.3, Voice Traffic Report and C.3.3.1.4.1.4, Data Traffic Report for report requirements. [C.3.3.1.2.3]

AT&T will provide the Government with ad hoc traffic and usage reports to support the Government's telecommunications planning and avoidance of fraud, waste, and abuse. The Networx management system provides GSA and Agencies with real-time traffic alerts, traffic reports, usage reports, and fraud reports for many service types. Traffic alerts take the [REDACTED]

[REDACTED] Reports can be run online, on-demand, and then can be sent to e-mail addresses. Some reports may be scheduled for daily, weekly, or monthly presentation. AT&T will provide the Voice Traffic Reports in full compliance with Table C.3.3.1.4.1.3.3.1 Media/Transport/Format – Voice Traffic Report Sent to GSA. AT&T will provide the Data Traffic Reports in full compliance with Table C.3.3.1.4.1.4.3.1 Media/Transport/Format – Data Traffic Report Sent to GSA.

AT&T **BusinessDirect** users are provided with a large array of traffic reporting capabilities across their services such as the following:

- Daily summaries of inbound and outbound domestic long distance usage.

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

- Management monitoring reports for toll, PBX, and calling card fraud
- Monthly, weekly, daily and daily exception and recommendation reports
- Traffic statistics on peg counts, busy hour, overflow, trunks busy, blocking, average call length, [REDACTED]

[REDACTED]

The GSA and subscribing Agencies have access to management tools for Networkx services to query and download accounting information through the secure Networkx [REDACTED] AT&T **BusinessDirect**. Ad hoc traffic and usage reports to support Government telecommunications planning and avoidance of fraud, waste, and abuse are accessible through **BusinessDirect**.

Fault Management [L.34.2.3.2, C.3.3.1.2.4 Step 4]

The contractor shall implement a process for Government-driven escalations as well as contractor-driven escalations to succeeding levels of management when a fault is not resolved within the required performance target or when the Government has indicated dissatisfaction with the way the contractor has handled the issue. [C.3.3.1.2.4]

AT&T will implement a process for Government-driven escalations as well as AT&T-driven escalations to succeeding levels of management when a fault is not resolved with the required performance target or when the Government has indicated dissatisfaction with the way AT&T has handled the issue. AT&T runs one of the world's largest and fastest growing IP networks with a Common Backbone network of nearly 500 high-speed routers. To keep the IP network up and running with the reliability, speed, and performance that is demanded by GSA Customers, we face three major challenges, namely:

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

To achieve these goals we need superior systems and tools that monitor the status of the IP Network at all times, alert when problems arise with traffic flows, delays or latency, diagnose the root causes of the problems, and model the effects of proposed solutions. In addition we need the capability for auto-provisioning new network elements and services, auto-configuring the network to meet ever changing traffic patterns, fault management techniques that rapidly restore the network on failures, a level of control of all network elements that enables us to offer Service Level Agreements (SLAs) to GSA Customers, and a unified database architecture that supports the network management and operation goals outlined above. The desired end state is the economic improvement of network performance and reliability. [REDACTED]

Outages measured at the Agency level			
Any Networkx service			
Any Domestic Networkx service			

Table 2.3.2-8 Service Outage Restoration Times and Percentages.

The Networkx Help Desk in the Customer Support Office (CSO), available 24X7, [REDACTED]

[REDACTED] **Figure 2.3.2-10** describes the operational flow of this function. The Time To Repair (TTR) is defined as the service restoration time as measured from the outage recorded [REDACTED] [REDACTED] This TTR is reduced accordingly by any scheduled configuration or maintenance outage, any agreed to outage by the Government, or any Government caused delay.

Figure 2.3.2-10: Networkx Help Desk Trouble Ticket Management. GSA customers leverage commercial best practices in managing Networkx customer trouble tickets.

GSA customers can generate and track all trouble tickets electronically in [REDACTED] through AT&T **BusinessDirect**. Updates are provided as a function of the severity of the problem. **Table 2.3.2-9** defines the response notifications.

SEVERITY	DESCRIPTION	RESPONSE (TROUBLE TICKET UPDATE)
1	A critical problem stops a Networkx provided service or circuit from functioning. The network or application is unusable.	[REDACTED]
2	Major problem has a severe impact on a customer's business, but not its functioning. The network or application is degraded and the	[REDACTED]

SEVERITY	DESCRIPTION	RESPONSE (TROUBLE TICKET UPDATE)
3	customer is partially unable to work productively. Minor problem with limited impact on a customer's business.	
4	No problem – a customer's business is not impacted; there is no significant impact to the user. Incident may be a request for service information or a suggestion.	

Table 2.3.2-9: AT&T response notifications. As service faults are entered into the trouble ticketing system, notifications are handled as described in section C.3.4.2 Trouble and Complaint Handling.

The escalation process for notification consists of a set of Tiers (levels).

CSO

Problems must be resolved in the minimum timeframes shown in **Table 2.3.2-10**. If not then the problem is escalated as in **Table 2.3.2-10**.

Table 2.3.2-10 is also followed for Government driven escalations. Status to appropriate personnel within the Government will be provided in the same timeframes as the escalation progresses.

ESCALATION LEVEL	REPORTING CRITERIA	REPORTING FREQUENCY	AUTHORITY

Table 2.3.2-10: Contractor Driven and Government Driven Trouble Ticket escalation procedures. Network customers are assured of appropriate attention due to rapid escalation notifications through the AT&T organization.

The contractor shall resolve each service outage for any Networkx service within 8 hours for restoration requiring dispatching of personnel except for non-domestic SDPs. (3.3.1.2.4)

AT&T will resolve each service outage for any Networkx service

for restoration requiring dispatching of personnel

Performance Management [L.34.2.3.2, C.3.3.1.2.5 Step 5]

The [REDACTED]
provides the PMO and GSA Customers with an identical set of service

performance reports as commercial customers receive. These are available through AT&T **BusinessDirect**. Agency performance reports are available to those individuals with access permission from the specific Agency. They include SLA, usage, availability, Quality of Service, and real-time performance exception reports. Metrics are collected across all key

performance indicators (KPI) including [REDACTED]

[REDACTED]

[REDACTED]

[REDACTED] Any credits associated with service performance not meeting Networkx requirements are established by [REDACTED] information.

The [REDACTED] platform is integrated into the network service, element management system (EMS), and operational support system (OSS) layers. At the network service layer there is integration with the access network, the core network, and the Internet. [REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

Network Services Monitoring and Management

[L.34.2.3.2, C.3.3.1.2.6 Step 6]

The contractor shall provide a Network Services Monitoring and Management capability to provide real-time information regarding the health of the contractor's network as it applies specifically to the services the Agency has selected for this option. [C.3.3.1.2.6]

The contractor shall provide a Network Services Monitoring and Management capability to provide real time informational updates of the status of problem resolution efforts within the contractor's Trouble Management System as it applies specifically to the services for which the Agency has selected this option. [C.3.3.1.2.6]

The contractor shall provide additional hardware, software, and other means of access as determined by the contractor to provide this capability. [C.3.3.1.2.6]

AT&T will provide a Network Services Monitoring and Management capability to provide real-time information and informational updates regarding the health of the AT&T network and the status of any associated problem resolution efforts within AT&T's Trouble Management System as they apply specifically to the services the Agency has selection for this option. Service-specific real-time fault notification, traffic-reporting, and SLA reporting capabilities are defined in **Table 2.3.2-11**. Service independent traffic and

SLA reporting mean that the traffic and SLA information is collected independent of the service, but applies to the service (many services operate on common facilities). [REDACTED]

[REDACTED] AT&T **BusinessDirect** presents the

Agencies with the network services monitoring and management functionality for the services in **Table 2.3.2-11** [REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

[REDACTED]

Table 2.3.2-11. The capabilities defined in **Table 2.3.2-11** are available through two separate applications accessible via AT&T **BusinessDirect**. Real time notifications are provided via the **BusinessDirect** Map (BD Map) application. [REDACTED]

Table 2.3.2-11: Service-Specific Reports Available.

Real time informational service updates (fault notification, traffic, and SLA reporting) and the status of problem resolution efforts are communicated to GSA Customers through [REDACTED]. This includes KPIs for each service the Agency has selected (**Figure 2.3.2-11**). GSA Customers are able to perform their own KPI measurement if desired [REDACTED]. Access to Agency real-time informational service updates is only available to those individuals with appropriate access permission from the specific Agency.

GSA Customers will have access to the eMaintenance application within the **BusinessDirect** web portal. This application includes real time informational updates of the status of problem resolution efforts within our Trouble Management System as it applies specifically to the services the Agency has selected for this option.

AT&T **BusinessDirect** is a worldwide-web accessible portal provided to authorized Government users and is Internet accessible requiring no additional hardware or software.

Network Management Capabilities and Methodologies [L.34.2.3.2]

For all services proposed, the offeror shall describe its network management organization, resources, strategies, practices, policies, processes, procedures, tools, systems, reports and any other relevant capabilities to provide the Government with a high degree of confidence that the offeror has sound, effective, and adequate capabilities that meet Government network management requirements.

For the network management areas above, the offeror shall describe its network management capabilities to provide the Government a high degree of confidence that the offeror will be a strong partner that understands the challenges that the Government faces in:

(a) Managing the wide range of Networkx services, (b) Meeting the needs of a large, heterogeneous, and geographically distributed user community, (c) Ensuring the performance and quality of Networkx services, (d) Improving the quality of Networkx services to its customers, (e) Minimizing the impact of Networkx services changes to Government operations, (f) Planning for future growth, (g) Meeting changes in Government needs, (h) Ensuring real-time access to information regarding the health and performance of mission-critical services

For Network Services Monitoring and Management, the offeror shall describe the solution's architecture, features, and functions that will be provided to the Government. This includes security features, support to the Government to install, configure, administer, and operate the solution, and the Networkx services for which the solution is provided.

As a benefit to the Government new management tools and technology providers are constantly evaluated to enhance network management capability and functionality when demanded. [REDACTED] development and systems engineering organizations maintain OSS (GFP, [REDACTED] [REDACTED] Laboratory facilities with the

latest network and computing equipment, as well as other resources such as technical libraries, membership in professional organizations, and attending conferences are available to the OSS research and development team. This team applies industry best practices to evaluate, prototype, and test proposed technology enhancements as shown in **Table 2.3.2-12**.

Life-Cycle maintenance and support for the network management platform is provided by OSS Research & Development. These organizations provide the following technical support functions:

Category	Value (approximate percentage)
1	95%
2	98%
3	88%
4	45%
5	99%
6	92%
7	96%
8	99%
9	97%
10	94%
11	98%
12	99%
13	87%
14	97%
15	62%

Table 2.3.2-12 presents network management capabilities and methodologies. **Table 2.3.2-13** describes why AT&T provides a high degree of confidence maintaining we are a strong partner for GSA.

AREA	DESCRIPTION
Network Management Organization	AT&T Labs, [REDACTED]
Resources	[REDACTED] AT&T has a wide range of commercial offerings and integration experience. AT&T operates one of the largest networks in the world.
Strategy	[REDACTED]
Practices	[REDACTED]
Policies, Processes, and Procedures	[REDACTED]
Tools	[REDACTED]
Systems Reports	AT&T BusinessDirect™ [REDACTED]
Other Relevant Capabilities	Customers may function in a shared or dedicated environment. In 2004 AT&T received the Yankee Group's #1 Ranking of Telecommunications Service Providers, and ranked number one by earning top scores in Corporate Reputation, Sales and Marketing, Technical Competence, and Service and Support.

Table 2.3.2-12: Overarching Network Management Capabilities and Methodologies. *Today, AT&T manages the wide range of Networkx services across a large and diverse marketplace and has the capabilities to meet Government network management requirements.*

NETWORK MANAGEMENT CAPABILITIES	HOW DO AT&T'S CAPABILITIES PROVIDE THE GOVERNMENT A HIGH DEGREE OF CONFIDENCE THAT THE OFFEROR WILL BE A STRONG PARTNER THAT UNDERSTANDS THE CHALLENGES THAT THE GOVERNMENT FACES IN?
Managing the wide range of Networkx services	[REDACTED]
Meeting the needs of a large, heterogeneous, and geographically distributed user community	[REDACTED]
Ensuring the performance and quality of Networkx services	[REDACTED]
Improving the quality of Networkx services to its customers	[REDACTED]
Minimizing the impact of Networkx services changes to Government operations	[REDACTED]
Planning for future growth	AT&T makes annual investments of over [REDACTED] AT&T Labs have been awarded 128 patents over the last 2 years. More than 80% of the Labs work is in the development of new services and the solution of important business requirements.
Meeting changes in Government needs	[REDACTED] GSA Customers receive the benefit of proven change management practices.
Ensuring real-time access to information regarding the health and performance of mission-critical services	[REDACTED]

Table 2.3.2-13: Strong Partner for GSA. *Here we describe the capabilities of AT&T's solution and how we will meet the challenges the Government faces.*

Security features were discussed in the Networkx Security Management (C.3.3.1.2.1) above. AT&T will provide support to GSA Agencies directly through the CPO and CSO to install, configure, operate, maintain, and administer the network management solution for Networkx services.

If the Offeror's approach to meeting Network Management requirements is different for optional services than for mandatory services, the offeror shall describe the differences in a separate optional services sub-section within the Network Management section of the Offeror's response.

AT&T's approach to meeting GSA's network management requirements for optional services is identical to its approach for GSA's network management requirements for mandatory services.

Summary

GSA customers have access to future services and business practices because of substantial annual R&D investments in the telecommunications technology environment. Our dedicated integration, development, life-cycle support, and operations support teams have the primary goal of enabling GSA Customers to focus their resources on accomplishing their missions more effectively and efficiently. **Table 2.3.2-14** summarizes the features of our solution and the benefits to GSA.

[illegible]

FEATURES	BENEFITS
[REDACTED]	[REDACTED]
[REDACTED]	<p>AT&T Labs [REDACTED] GSA customers have access to future services, practices, and solutions they need as their requirements change.</p>
[REDACTED]	<p>[REDACTED]. This gives GSA customers regular predictable upgrades to maintain technological currency and minimizes impact to Government operations.</p>
[REDACTED]	<p>[REDACTED] This improves operational efficiency, and minimizes impact to Agency missions.</p>

Table 2.3.2-14: Features & Benefits. *The AT&T network solution provides GSA customers with conspicuous lifecycle and service management value.*

Gartner

AT&T is the only Network Service Provider (NSP) to be listed in the "Leader Quadrant" in all four of the Network Service Provider Magic Quadrants covering Europe, Asia Pacific, and the U.S.
